Hospitals spend millions on technology, but what information doesn’t make it to the right place?

The real cost
Multiple printers and servers can lead to unnecessary IT support, lapses in patient care and gaps in data protection.

70% Percentage of respondents who had accidental printing-related data breaches.*

Our software provides connectivity from multiple hospital system platforms to a wide range of output devices.

For critical information that’s constantly on the move.

Enterprise Output Management for Healthcare

Complex back-end systems and output devices that aren’t compatible can impact the flow of information – and the quality of patient care.

RICOH imagine. change.
