

Security Baseline Assessment

[DATA PROTECTION]

RICOH
imagine. change.

GET A BASELINE UNDERSTANDING OF YOUR SECURITY POSTURE

SECURITY ASSESSMENT

Rapid discovery and analysis of your IT infrastructure and security policies.

REMEDIATION PLANNING

Prioritize actions to address vulnerabilities based on business risk.

COMPLIANCE & BEST PRACTICES

Configuration recommendations compared to manufacturer and industry best practices.

CONTINUITY & AVAILABILITY ASSESSMENT

Gap analysis of infrastructure availability and business continuity plans.

Most organizations are unsure of what their cyber security posture is and their protection level against threats and security incidents. They have an unclear vision of how well positioned they are or how they can align their cyber security spending with their business objectives to build a clear and defined cyber security roadmap. This can lead to several issues, including wasted security expenses, misalignment between security initiatives and company objectives, and a lack of security direction in general.

A Security Baseline Assessment can be a much-needed exercise that will provide data-driven insights to guide your overall cyber security strategy.

FEATURES

Our Security Baseline Assessment reviews the current state of your infrastructure to determine where your organization stands in terms of security policies, best practices and potential weak points. Our unique assessment approach details your organization's security posture and provides three different tiers of compliance grading, complete with a remediation plan to harden your systems and increase your resilience against malicious attackers.

- Security whiteboarding
- Security policy review
- Perimeter security and device configuration review
- Critical business application security review
- Business continuity and availability review
- Private/Public cloud security & configuration review

BENEFITS

- Proactively identify security vulnerabilities that pose a risk to the information technology infrastructure
- Prioritize actions to address vulnerabilities based on business risk
- Plan improvements to the overall security state of the organization's infrastructure with remediation plans to mitigate identified vulnerabilities and weaknesses

Understand the strengths and weaknesses of your organization's current defences

- Reduce the time and resources needed to stay up-to-date with new and emerging vulnerabilities
- Locate potential vulnerabilities in your information technology systems and highlight their grade of severity over three tiers

WHAT'S INCLUDED

To provide flexibility, the following tiers are available to help fit your organization's size and needs. Please speak with your Ricoh representative for more information.

Express	Standard	Advanced	Premium
Up to 1 site	Up to 2 sites	Up to 4 sites	Up to 8 sites
Up to 50 devices	Up to 150 devices	Up to 300 devices	Up to 500 devices
Up to 30 Users	Up to 65 Users	Up to 150 Users	Up to 325 Users
Up to 5 Servers	Up to 10 Servers	Up to 30 Servers	Up to 50 Servers
Up to 1 Microsoft 365/Azure Tenant	Up to 1 Microsoft 365/Azure Tenant	Up to 2 Microsoft 365/Azure Tenant	Up to 2 Microsoft 365/Azure Tenant
Up to 2 security policies	Up to 5 security policies	Up to 10 security policies	Up to 15 security policies
Up to 1 whiteboarding session (1 hour)	Up to 1 whiteboarding session (1 hour)	Up to 1 whiteboarding session (1 hour)	Up to 1 whiteboarding session (1 hour)
Up to 2 applications	Up to 3 applications	Up to 5 applications	Up to 10 applications
