

Vulnerability Scan

Internal Environments for SMB

RICOH
imagine. change.

DISCOVER THE WEAK POINTS IN YOUR IT INFRASTRUCTURE

IMPROVE CYBER SECURITY POSTURE

Identify your potential attack surface and remediations to reduce threats.

SAVE TIME AND EFFORT

No interruptions to normal business activities.

RESOLVE VULNERABILITIES

Generate a list of patches required and solutions to fix the vulnerabilities.

OPTIMIZE POTENTIAL

Identify areas where existing security solutions might be improved.

Ricoh's Vulnerability Scan is an on-demand service used to assess all network connected devices such as servers, computers, switches, network devices, peripherals, applications and more. These scanners are used to discover the weak points or gaps within an IT infrastructure.

The scan will be conducted using a combination of discovery tools for thorough detection. The results are then correlated to eliminate false positives and create a more robust and accurate picture of the vulnerabilities.

The vulnerability scan can be done on-site or remotely using a secure VPN tunnel to access the infrastructure at your convenience.

HOW IT WORKS

The vulnerability scan checks your environment for the following items:

- Security updates
- Missing patches
- OS Command injections
- Database security
- SQL injection
- Application vulnerability
- Network scanning
- Open network ports
- Running network services
- Malicious application identification
- Web server vulnerabilities
- Authentication configurations
- Password strength
- Improperly configured services, protocols & applications
- Network switches and routers
- Vulnerability and configuration
- Virtual environments

DELIVERABLES

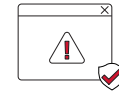

VULNERABILITY SCAN

Scans for vulnerabilities and identifies security gaps within your infrastructure

EXECUTIVE SUMMARY

Outlines detected vulnerabilities and the possible business impacts

TECHNICAL REPORT

Details detected vulnerabilities, associated risks and knowledge-based links

OPTIONAL ADD-ONS

VULNERABILITY MANAGEMENT

Proactive management to mitigate vulnerabilities and prevent exploits.

COMPLIANCE SCAN

Assess adherence to defined policy standards and compliance frameworks.

VULNERABILITY SCAN

A step-by-step action plan with detailed mitigation activities.

PATCH MANAGEMENT

Includes testing and installing multiple patches to computer systems.

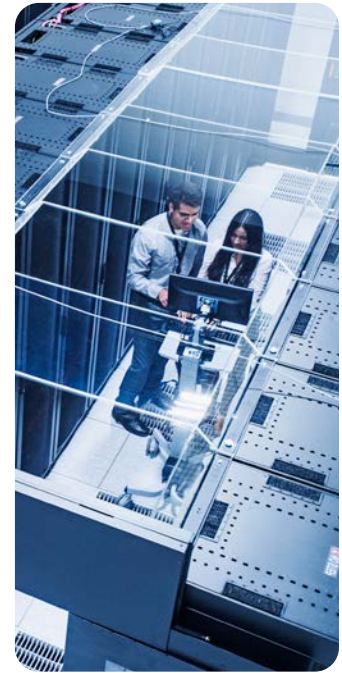

REMIEDIATION

Remediation of security alerts or issues by our expert security teams.

COMPLIANCE CONSULTATION

Support in implementing compliance strategies into business policies.
