

Office Cloud Scan Print

Business Information Solutions

RICOH
imagine. change.

Only 24% of North American company IT decision makers have a BYOD mobile print strategy in place and 47% did not but were actively seeking a solution.*

The Business Challenge

Office based and mobile workers need more efficient ways to print from their laptops, smartphones and tablets. This puts pressure on companies to accommodate these workers with advanced scanning capabilities, cloud-based services and mobile device printing capabilities – all without compromising security, functionality or productivity. Businesses that don't integrate an advanced scanning, cloud-based services and mobile device printing solution into their IT infrastructure are forced to deal with cumbersome, non-standard scan, print workflows and the inherent inefficiencies that result.

Ricoh provides office based and mobile workers with the cloud-based printing solutions they need.

Ricoh's scan, cloud file services and mobile printing solution provides office based and mobile workers with powerful OCR capability built into high level scanning functionality and our Integrated Cloud Environment (ICE) platform. This solution gives

you the capability to scan to many different cloud services applications – including Egnyte, Google Drive and Box. This Ricoh hosted cloud-based repository then allows office based and mobile workers to print to a cloud print-enabled multifunctional printer.

 <p>RULE BASED JOB ROUTING/PRINTING</p>	<p>Is your current scanning, routing and printing workflow inefficient or hurting profitability?</p> <p>Given an emerging office based and mobile workforce, embracing an increasing BYOD device usage trend, it's imperative for companies to have an infrastructure integrated printing solution in place for these workers. If your office based and mobile workers can't print, scan or route important documents efficiently, they'll use legacy workarounds to manage their workflow. This can waste time and resources while adversely affecting overall worker productivity and collaboration.</p>
 <p>Do you have difficulty synchronizing files across multiple devices, workers, cloud services and applications?</p>	<p>Our Integrated Cloud Environment (ICE) mobile platform offers cloud-based smart scanning, routing and mobile printing capability. Documents are scanned or emailed to a Ricoh hosted cloud service as an image file. Then our OCR Engine converts the document to a searchable file any authorized user can view, print or send, from anywhere using their mobile device.</p>
 <p>Are you concerned about meeting regulatory compliance requirements?</p>	<p>Ricoh's solution can help you meet document security and government regulatory requirements. Authorized users get reliable access and synchronization of all content placed beyond the company's firewall. Data transferred between the MFP and ICE is encrypted using 128 bit SSL and data stored with Ricoh ICE and Print Cloud is within SAS 70/SSAE 16 compliant facilities.</p>
